Bescheinigung

Die beiliegenden Akten stimmen überein mit den ursprünglichen Unterlagen der auf den nächsten Seiten bezeichneten, beim unterzeichneten Amt als Anmeldeamt im Sinne von Art. 10 des Vertrages über die internationale Zusammenarbeit auf dem Gebiet des Patentwesens (PCT) eingegangenen Patentanmeldung.

Attestation

Les documents ci-joints sont conformes aux pièces originales relative à la demande de brevet spécifiée aux pages suivantes, déposées auprès de l'Office soussigné, en tant qu'Office récepteur au sens de l'article 10 du Traité de coopération en matière de brevets (PCT).

Confirmation

It is hereby confirmed that the attached documents are corresponding with the original pages of the international application, as identified on the following pages, filed under Article 10 of the Patent Cooperation Treaty (PCT) at the receiving office named below.

5 **Method and system for detecting a leakage in a pipeline or similar
conduit**

Field of the invention

10 The present invention relates to pipelines or similar conduits which are used for the transfer of fluids such as gas, water or oil.

More precisely the invention relates to methods and systems for detecting leakages in such conduits.

15 Detailed description of the invention

The principle underlying the invention consists in measuring the pressure profile and, optionally, the temperature profile of a solution front, e.g. a saline solution, traveling through an umbilical tube laid within and along the pipe (see Figures 1 and 2).

20 The pressure profile measurement can be similar to the pressure profile measurement used in the medical field as disclosed in US patent 6 450 972 , International patent application PCT/03/00227 or in European patent application EP 1 371 325 A1.

25 The solution travels through the pipe and its front pressure is frequently measured creating thereby a discrete pressure and, optionally, temperature profile.
Whenever a pressure drop/increase is encountered the solution front will be deformed and its measured pressure will drastically change. Since the position of the solution front along the umbilical tube can be determined (e.g. according to
30 the methods disclosed in the previous cited patent documents), the leakage point can be localized.

In a preferred embodiment of the invention (see Figure 3) a saline solution is used. The position of its front along the umbilical tube can be determined in
35 measuring the electrical resistance or capacity of the saline solution.

A deformation of the saline solution front caused by the pressure outside the umbilical tube will lead to a geometry change and thereby a change in the

5 electrical resistance or capacitance which, for instance, can be measured by a leakage current and a current to voltage converter as disclosed in PCT/CH03/00227.

The following system may be used with the previous cited embodiment. It
10 includes :

- A PPT umbilical tube laid within and along the main pipe which comprises a magnetic flat top in order to fix it to the main pipe, a flexible U-shape bottom capable of being deformed by pressure variation, an external coating with an electrical conducting paint in order to transmit signals;
- 15 - A saline solution to be pumped through the pipe from one end to the other ;
- Pressure and optionally temperature sensors and, when a current to voltage converter is used, two capacitive sensors. The sensors preferably have a thick membrane in order to avoid parasitic effects and are placed at the beginning and at the end of the umbilical tube;
- 20 - A pump adapted for moving the saline solution all the umbilical tube.

When used with oil pipelines, to have a rough screening, in order to localize a leakage or an important drop in the pressure, a measuring point every 200 meters is sufficient. In such a case, a software makes the extrapolation between these
25 points.

The invention is of course not limited to the above cited examples. It includes any pipe leakage detecting method which can dynamically measure the pressure and the position of a solution front traveling in a flexible tube laid within and along a
30 pipe.

5

Claims

- 10 1. Method for detecting a leakage in a pipeline or similar conduit characterized by the use of an umbilical flexible tube laid within said pipeline, the displacement of a solution column within said umbilical flexible tube, the measurement of the pressure at the front of said solution column and the localization of said front from the said measured pressure.
- 15 2. Method according to claim 1 furthermore comprising the measurement of the temperature at the front of said solution column.
3. Method according to claim 1 or 2 wherein the solution is a saline solution and wherein the measurement of the pressure is obtained via the measurement of the electrical resistance or capacity.
- 20 4. System for detecting and localizing a leakage in a pipeline or similar conduit using the method of claim 1,2 or 3 characterized by the fact that it comprises :
- An umbilical flexible tube adapted to be laid within a pipe;
- Pumping means adapted for moving a solution within said umbilical flexible tube;
25 - Pressure measuring means adapted for determining the pressure at the front of a solution moving within said flexible tube;
- Localization means adapted for determining the position of a solution front from the measured pressure of said front.
- 30 5. System according to claim 4 furthermore comprising temperature measuring means adapted for determining the temperature at the front of a solution moving within said flexible tube.
- 35 6. System according to claim 4 or 5 furthermore comprising capacitive sensors adapted for measuring the electrical capacity of a solution moving within said flexible tube.

5

Abstract.

- 10 The invention concerns a method and a system for detecting a leakage in a pipeline or similar conduit characterized by the use of an umbilical flexible tube laid within said pipeline, the displacement of a solution column within said umbilical flexible tube, the measurement of the pressure at the front of said solution column and the localization of said front from the said measured
- 15 pressure.
